

Task Update - 18/07/2025

- Wrote a query to calculate gas usage per block to analyze block utilization.
- Improved the transaction revenue query by making required changes.
- Collected key details (like parent chain, gas token, etc.) about various Orbit chains.
- Explored how Arbitrum generates revenue through Orbit chains.

Task Update - 19/07/2025

- Explored and prepared a list of all known Orbit chains. For each chain, I noted down important details like its category, gas token, its parent chain (like Arbitrum One or Ethereum), and the specific layer it belongs to in the blockchain ecosystem.
- Also studied how these Orbit chains are connected to the Arbitrum ecosystem and how they help in generating revenue for the Arbitrum DAO
